

-
- Figure 1 is a map of the study area in the Hailu River estuary. The map shows the coastline of the estuary with various sampling stations marked by letters A through Z. The stations are distributed along the river and in the surrounding waters. A scale bar at the bottom left indicates a distance of 10 km. A north arrow is located at the bottom right. The map also shows some land features and the confluence of the river into the sea.

- Group Overseers may be given several territory maps or map cards for their groups on weekends and for working during the week. Group Overseers or publishers (if recommended) may check out territories for up to 4 months with the purpose of working it thoroughly on different days and at different times—effectively utilizing the house-to-house record form—until reasonable efforts have been made to contact someone in every home. —See *Organized* book, page 91, pars. 32, 33.

- 2 Corinthians 10:13:** “However, we will not boast outside our assigned boundaries, but within the boundary of the territory that God measured out to us.”
